

Cumberland School District

Dear Parent:

There is a known case of Impetigo in your child's grade. This is information for you to know:

\*Impetigo is caused by a strain of strep bacteria.

\* Time from exposure to first signs is usually 2-5 days.

\*Small lesions appear on the skin, which contain pus or clear fluid and become crusted.

\*If the above symptoms appear, contact your healthcare provider.

\*Keep your child home until your child has been on antibiotic treatment for at least 24 hours or all lesions are healed.

Mrs. Kristin Olson, RN  
School Nurse
